New Cloud-Based Payment Automation Solution is Live!

JACKSONVILLE, Fla- December 7, 2016 – OnPay Solutions, a nationally accredited AICPA service organization and business-to-business payment automation company headquartered in Jacksonville, Florida, has announced its new cloud-based, B2B payment automation solution, OnPayConnect™.

“Helping Businesses Automate Payments is all we do,” said Neal Anderson, CEO of OnPay Solutions. We help A/P Departments move away from costly, time-consuming check-printing and transition them to automated ePayments via ACH and Virtual Cards (VCards). We can even automate Wire Transfers. We are so proud to introduce our new cloud-based platform, OnPayConnect™ a system that is perfectly suited to our clients or any large A/P department that seeks an even more streamlined and efficient way to make payments. ”

Not that long ago, payment files could only be accessed by physically sitting by and logging into the computer hard drive. Today, however, many individuals take advantage of the advances in technology and utilize cloud platforms to conduct their personal business. Individuals can access email, share file docs, schedules, and financial information/bill pay from anywhere, anytime.

Many businesses are realizing those benefits and becoming willing to migrate B2B payment automation to a cloud platform. Businesses that move to “the cloud” can reduce the overhead and cost associated with maintaining software and hardware.

First, costs are reduced. Costly check printing and mailing becomes a thing of the past when online payments are issued and vendor payments become paperless.

Vendor onboarding for ePayments can be an expensive, time consuming and tedious task; using OnPayConnect™, however, vendors self-register for an ePayment program and that information is available for our clients. This saves time, is more convenient, reduces labor costs, lowers impact on IT, reduces errors and improves vendor participation.

Second, risk is minimized. In an online article released by Bloomberg, "Using cloud-based software, an accountant can send a QuickBooks entry to managers for digital approvals, record the transaction in all ledgers, and send payment out automatically for processing. The result: Fewer employees have to deal with payments". Add in automating payables via OnPayConnect™ and even less risk is realized as ePayments are much more secure than check printing.

Third, efficiencies are maximized. Not only is risk minimized with cloud-based payments, but the aforementioned accountant or accounts payable team member, does not have to be sitting at his or her office PC. It can be done from his/her mobile device from anywhere, anytime.

Fourth, there is no burden on a company's IT department. These platforms are very user friendly.

The benefits of a cloud-based payment automation system, like OnPayConnect™, are endless. These are just a few of the ways a cloud-based payment automation system can benefit a business!!
